

NX Advanced Flow: Extend flow analysis solutions

NX CAE

Benefits

- Extend flow solution capabilities in NX Flow and NX Electronic Systems Cooling
- Speed solution time through parallel flow calculations
- Reduce costly physical prototypes by using flow simulation to understand product performance
- Gain further insight through coupled thermo-fluid multiphysics analysis using NX Advanced Flow with NX Thermal or NX Advanced Thermal
- Achieve faster CFD results through a consistent environment that allows you to quickly move from design to advanced CFD results
- Track the interface between two fluids in a sloshing problem
- Couple 1D to 3D flow submodels to simulate complex systems

Summary

NX™ Advanced Flow software is a powerful and comprehensive solution for computational fluid dynamics (CFD) problems. NX Advanced Flow is an add-on module to both NX Flow and NX Electronic Systems Cooling that extends the flow simulation capabilities of these products to include internal or external fluid flow including compressible and high-speed flows, non-Newtonian fluids, tracking of heavy particles, and multiple rotating frames of reference. Combined with NX Thermal and NX Advanced Thermal, NX Advanced Flow solves a wide range of multiphysics scenarios involving strong coupling of fluid flow and heat transfer.

NX Advanced Flow enables you to model and simulate complex fluid flow problems through an element-based, finite volume CFD scheme used to compute 3D fluid velocity, temperature and pressure by solving the Navier-Stokes equations. Applications of NX Advanced Flow include:

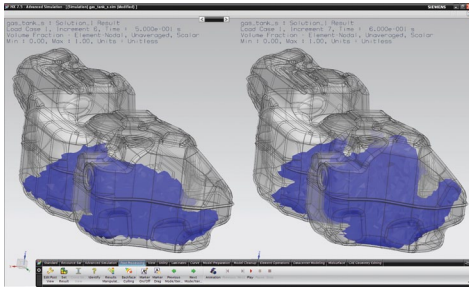

- Simulate fluid movement in a moving container (liquid sloshing)
- Simulation of automotive underhood cooling
- Flow and thermal comfort analysis for HVAC systems
- Modeling high speed compressible flows
- Simulation of rotating equipment
- Simulation of non-Newtonian fluid flow

NX

Answers for industry.

NX Advanced Flow

NX Advanced Flow features

Solver capabilities NX Advanced Flow adds the following capabilities to NX Flow:

- Single and multiple rotating frames-of-reference
- Additional turbulence models such as SST, k-Omega and LES
- High-speed flows with supersonic inlet
- General scalars diffusion and heavy particle tracking
- Humidity and condensation algorithm
- Non-Newtonian fluid models
- Translational and rotational periodicity
- 1D duct flow coupled with 3D flow
- Implicit convection correlations to ambient conditions
- Mixing plane boundary condition
- Two-phase, immiscible fluid flow for sloshing applications
- Multi-species mixing within the fluid domain
- Parallel computing with up to 8 solver processes on a single machine
- Unlimited-process parallel computing with NX Thermal/Flow DMP add-on
- Fully coupled pressure-velocity scheme applied in parallel solver mode
- Semi-implicit, second-order time integration methods for use in conjunction with LES turbulence model
- Second-order central differencing scheme

Add-on results post-processing options

- Mach number
- Humidity and condensation data
- Scalars distribution data
- Additional turbulence data
- Tracking of heavy particles
- PPD-percentage people dissatisfied (HVAC applications)

- PMV-predicted mean vote (HVAC applications)
- Track and plot flow data on specific regions at run time
- Acoustic power density result option

Fluid-thermal multiphysics NX Advanced Flow seamlessly couples with NX Thermal and NX Advanced Thermal for simulation of complex thermo-fluid interactions and conjugate heat transfer. The thermo-fluid solver handles disjoint meshes at fluid/solid boundaries allowing great flexibility in assembly context thermo-fluid interactions. The fluid domain and thermal domain do not need to share nodes at the interface; the coupled solver will create the appropriate heat transfer coupling at all the solid/fluid interfaces.

Fluid-structural coupling Pressure and shear force results from the NX Flow solution can be used as a pre-stress condition for a structural analysis. The NX Nastran® license is sold separately.

Supported hardware/OS

NX Advanced Flow is an add-on module to either NX Advanced FEM or NX Advanced Simulation. It requires either a license of NX Flow or NX Electronic Systems Cooling as a prerequisite. NX Advanced Flow is available on the same supported hardware platforms as NX Advanced FEM. Contact Siemens PLM Software for for any other specific hardware/OS support requests.
